The design process is the first step in the architectural journey. It is where the architect develops the concept for the building. The architect will start by interviewing the client to get a sense of their needs and wants. They will then develop a design that meets those needs.

The design process is often iterative, with the architect going back and forth between the client and the design team to refine the design. Once the design is finalized, the architect will create construction documents, which are the detailed plans that will be used to build the building.

The construction process is the next step in the architectural journey. It is where the building is actually built. The construction process is typically managed by a general contractor, who is responsible for hiring the subcontractors and overseeing the construction process.

The construction process can be complex and time-consuming. It is important for the architect to be involved in the construction process to ensure that the building is built according to the design.

In the book *Architects Stepping Stones*, author [Author's Name] interviews some of the world's leading architects. These architects share their insights on the field of architecture and offer their advice to aspiring architects.

The interviews are a valuable resource for anyone who is interested in architecture. They provide a glimpse into the minds of some of the world's most creative and innovative architects.

Architecture is a challenging and rewarding field. It is a field that is constantly evolving, with new ideas and technologies emerging all the time.

Architects are the ones who push the boundaries of what is possible, creating buildings that are both beautiful and functional.

The book Architects Stepping Stones is a valuable resource for anyone who is interested in architecture. It is full of information and inspiration, and it is sure to help you to better understand the world of architecture.
